

R2: API Regression Pass - Build v1.0.0

Initial execution pass over the core API folders (Login, Logout, Search, Book) to verify security controls, data validation integrity, and financial processing business rules.

Created On	10/7/2026
Completed	Yes
Completed On	10/7/2026

Passed	Blocked	Untested	Retest	Failed
82% (28/34)	0% (0/34)	0% (0/34)	0% (0/34)	18% (6/34)

Test Cases

Adactin API Test Suite 0

ID	Title	Test Labels	Assigned To	Status	AI Priority	AI Reason
----	-------	-------------	-------------	--------	-------------	-----------

Login API 12

ID	Title	Test Labels	Assigned To	Status	AI Priority	AI Reason
T40	Verify authentication failure when providing invalid login credentials		pavithra r.	Passed		
T41	Verify login functionality with valid user credentials (Happy Path)		pavithra r.	Passed		
T42	Verify authentication failure when providing an incorrect password		pavithra r.	Failed		
T43	Verify authentication failure when providing an invalid/unregistered username		pavithra r.	Passed		
T44	Verify system behavior when mandatory login parameters are left blank		pavithra r.	Passed		
T45	Verify password parameter case-sensitivity		pavithra r.	Failed		
T46	Verify parameter omission handling when username and password fields are missing from the request		pavithra r.	Passed		

10/7/26, 2:12 PM

API Regression Pass - Build v1.0.0 - TestRail

T47	Verify system resistance against SQL Injection (SQLi) attacks	pavithra r.	Passed
T48	Verify system resilience against Cross-Site Scripting (XSS) input	pavithra r.	Passed
T49	Verify response format behavior under unauthorized HTTP methods	pavithra r.	Passed
T50	Validate data length handling and boundary behavior with massive character payloads	pavithra r.	Passed
T51	Verify parameter name case-sensitivity validation	pavithra r.	Passed

Logout API 7

ID	Title	Test Labels	Assigned To	Status	AI Priority	AI Reason
T52	Verify user session logout functionality using a valid active user token (Happy Path)		pavithra r.	Passed		
T53	Verify logout handling for an expired or already invalidated session token		pavithra r.	Passed		
T54	Verify logout behavior when the userToken parameter is completely blank		pavithra r.	Passed		
T55	Verify behavior when an un-mapped/invalid value is provided in the action field		pavithra r.	Passed		
T56	Verify system security resilience when a SQL injection payload is entered into the token field		pavithra r.	Passed		
T57	Verify system behavior when special alphanumeric symbols are sent inside the session parameter		pavithra r.	Passed		
T58	Verify that the server returns an appropriate HTTP error status code for an unauthorized request		pavithra r.	Failed		

Search Hotel API

5

ID	Title	Test Labels	Assigned To	Status	AI Priority	AI Reason
T59	[Happy Path] Verify successful hotel search using a valid active token and filled parameters		pavithra r.	Passed		
T60	Verify system validation handling when historical calendar dates are provided for a room query		pavithra r.	Passed		
T61	Verify query handling when an unrecognized city name is supplied to the location field		pavithra r.	Passed		
T62	Verify parameter validation when the room count selection (room_nos) is set to zero or a negative value		pavithra r.	Passed		
T63	Verify system handling when total guests heavily exceed room capacity constraints		pavithra r.	Passed		

Book Hotel API

10

ID	Title	Test Labels	Assigned To	Status	AI Priority	AI Reason
T64	[Happy Path] Verify successful hotel booking with valid dynamic token and complete parameter payload		pavithra r.	Passed		
T65	[Negative Path] Verify system handling when attempting a booking with an expired token		pavithra r.	Passed		
T66	[Boundary Test] Verify backend price verification when total_price is deliberately altered		pavithra r.	Failed		
T67	[Negative Path] Verify parameter input validation when an invalid credit card format is submitted		pavithra r.	Passed		

T68	[Negative Path] Verify transaction behavior when an expired credit card validation year is used	pavithra r.	Passed
T69	[Boundary Test] Verify data integrity validation when mandatory string fields like customer names are omitted	pavithra r.	Passed
T70	[Negative Path] Verify parameter security enforcement when an invalid/fake hotel name is injected into the payload	pavithra r.	Passed
T71	[Boundary Test] Verify data limit compliance when fields exceed maximum character length thresholds	pavithra r.	Passed
T72	[Negative Path] Verify data validation restrictions when a structurally malformed credit card security code is submitted	pavithra r.	Failed
T73	[Boundary Test] Verify backend safeguards when identical request payloads are fired consecutively within seconds	pavithra r.	Failed
